

# Visible Light Cavity Update

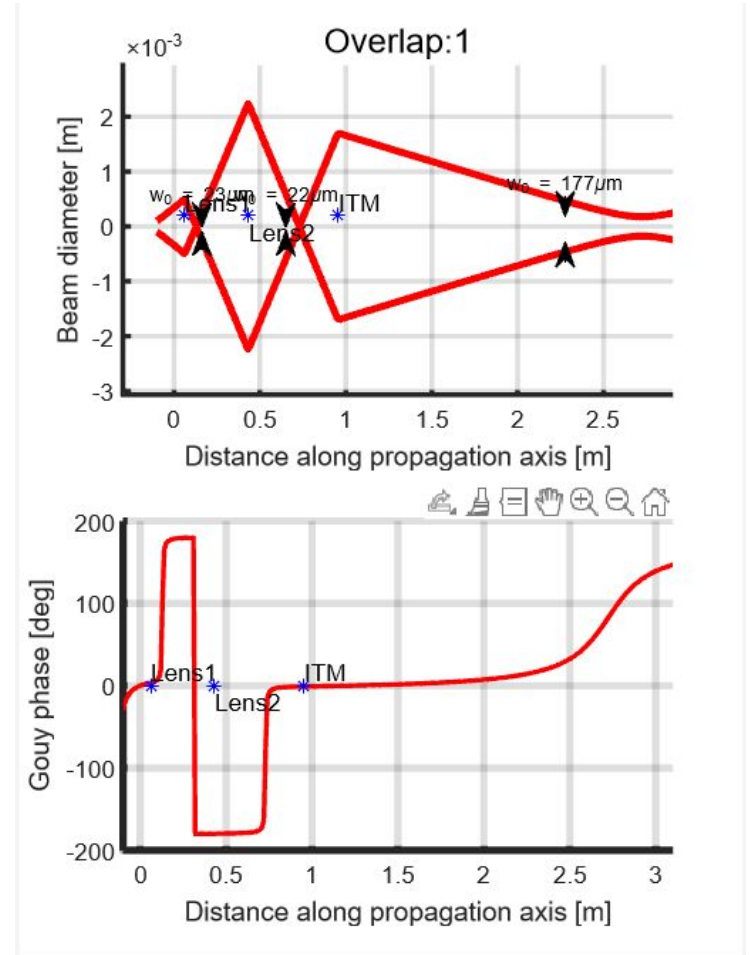

Peter Carney

10/30 - 11/3

# A La Mode Code

- Many possible mode matching solutions
- Length defined in z position from input q parameter
- Best option with lenses we have:
  - Lens1 = 0.0623m
  - Lens2 = 0.432m
  - ITM = 0.950m
  - $f2 = 0.05\text{m}$
  - $f3 = 0.15\text{m}$

# Cross check with FINESSE failed

- Used same parameters that A La Mode output
- No reasonable output
- Yet to find solution that outputs good mode matching in both FINESSE and A La Mode

# Next Steps

- Spent time looking through many solutions → Keep searching solutions with more focal lengths in FINESSE and A La Mode
- Debug FINESSE?
